

Care Instructions Following Tooth Extractions

- Bleeding:** DO NOT USE STRAWS OR RINSE FOR 24 HOURS. Discolored saliva may be apparent for 12-24 hours. If active bleeding occurs, bite on a gauze pad for 20 minutes. Do not disturb the clot. If bleeding still persists please call the office.
- Swelling:** Slight swelling may be expected to accompany the removal of teeth. If directed, apply ice to the area for 20 minutes of every hour for several hours for today only.
- Oral Hygiene:** Resume normal brushing as soon as possible. After today, rinsing with warm salt water (1/2 teaspoon salt to 3 oz. warm water) is optional, but aids healing.
- Diet:** Soft to normal diet as tolerated; encourage liquid intake.
- Pain:** If necessary, ibuprofen (Advil®) or acetaminophen (Tylenol®) may be taken.
